

70 KG TO 62 KG RECOMPOSITION HANDBOOK

Calisthenics Conditioning • Freestanding Handstand • Skateboarding Mastery • Zero-Crash Nutrition

ATHLETE PROFILE	DAILY ANCHORS TARGET
Height: 165 cm	Daily Calorie Ceiling: 1,800 kcal
Starting Weight: 70.0 kg	Daily Protein Anchor: 135g
Target Weight: 62.0 kg	Daily Hydration: 3.5 Liters
Total Fat Loss: 8.0 kg (pure fat)	Calorie Deficit: -550 kcal / day

1. THE TRANSFORMATION BLUEPRINT & CALORIE MATH

Can you drop from 70 kg to 62 kg with this routine?
YES, 100% Guaranteed by Human Physiology. At 165 cm, carrying 70 kg means you have approximately 8 kg of excess adipose tissue (fat). By combining calisthenics (which signals your body to retain muscle) with daily skateboarding (which accelerates calorie burn) and a calibrated calorie deficit, you force your body to metabolize 100% stored fat without muscle loss.

Metric / Component	Calculation / Formula	Daily Calories
BMR (Basal Metabolic Rate)	Mifflin-St Jeor formula for 70 kg, 165 cm	~1,600 kcal
NEAT (Daily Movement)	Walking, standing, daily life chores	+ 300 kcal
EAT (Calisthenics & Skate)	30m zero-equipment circuit + 45m skateboarding	+ 450 kcal
TDEE (Total Daily Burn)	Total energy expended by your body each day	~2,350 kcal
YOUR EATING TARGET	Target daily calorie consumption	1,750 - 1,800 kcal
NET DAILY DEFICIT	2,350 burned - 1,800 consumed	-550 kcal / day

Why eat 1,800 kcal instead of starving at 1,300 kcal?

- **Prevents Metabolic Crash:** Eating 1,300 kcal shocks your thyroid and drops your metabolic rate, causing quick weight-loss plateaus and extreme rebound bingeing.
- **Guarantees Muscle Preservation:** Calisthenics and handstands demand intense neurological recovery. 1,800 kcal with 135g protein keeps your muscles rock-hard so you drop **pure fat**.
- **8 kg Fat Loss Timeline:** 8 kg fat = ~61,600 kcal. At -550 kcal/day, $61,600 \div 550 = \sim 112$ days (**14-16 weeks**) of clean, consistent, permanent transformation.

2. COMPLETE NUTRITION & INDIAN MEAL UPGRADE

Upgrading Your Current Diet (7 Rotis + Sabzi + Chai):

Your current food is great home-cooked fuel, but it contains **only ~28g of protein**. With low protein, your body burns your shoulders and arm muscle instead of fat. We don't eliminate your rotis—we simply reduce 1 roti at lunch and dinner and replace it with real protein.

Meal Timing	Recommended Food & Upgrades	Approx Macros
Morning (8:00 AM)	• 1 Cup Chai (low sugar) • 1 Roti (light ghee) • ADD: 2-3 Boiled Eggs OR 100g Paneer Bhurji OR Besan/Sprouts Chilla	350 kcal 18g Protein 35g Carbs
Lunch (1:00 PM)	• 2 Rotis (reduced from 3) • 1 bowl seasonal Sabzi • ADD PROTEIN: 1 large bowl thick Dal/Rajma + 50g Soya chunks OR 120g Chicken breast curry • 1 sliced cucumber & tomato	550 kcal 38g Protein 60g Carbs
Pre-Skate / Evening (5:00 PM)	• 1 Banana (quick glycogen for skating & ollies) • 1 Scoop Whey Protein in water (or 1 glass milk + 2 boiled egg whites)	250 kcal 26g Protein 28g Carbs
Dinner (8:30 PM)	• 2 Rotis (reduced from 3) • 1 bowl Sabzi • ADD: 100g Paneer OR 3 Boiled Eggs (1 whole + 2 whites) OR Fish/Chicken OR thick Dal + 1 bowl curd (Dahi)	520 kcal 35g Protein 50g Carbs

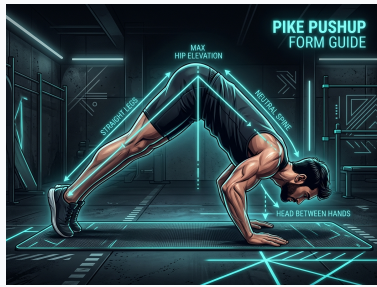

Top Indian Protein Sources for Your Shopping List:

- **Soya Chunks:** 50g uncooked = **26g protein**, ~170 kcal (Extremely cheap, soak in warm water, squeeze & cook with sabzi/curry).
- **Eggs:** 3 whole eggs = **18g protein**, ~210 kcal (Fastest breakfast, boiled or omelette with onions and chilies).
- **Low-Fat Paneer:** 100g = **18g - 20g protein**, ~240 kcal.
- **Chicken Breast:** 150g = **45g protein**, ~220 kcal (The leanest source of pure protein).
- **Thick Dal / Rajma / Chana:** 1 large bowl = **10g - 14g protein** + dietary fiber.
- **Whey Protein:** 1 scoop = **24g - 26g protein**, ~120 kcal (Zero cooking, instant post-workout/skate shake).

3. ZERO-EQUIPMENT CALISTHENICS ROUTINE (FULL BODY)

Frequency: 3 to 4 days per week (e.g., Monday, Wednesday, Friday, Saturday).

Structure: Perform as a circuit or straight sets. Rest 60s between sets. Zero gym equipment required.

1. Pike Push-ups

Target: Front Deltoids, Upper Chest, Triceps

Volume: 3 Sets × 8 - 10 Reps (60s rest)

Synergy: **Direct Shoulder Power for Handstands**

Cues: Form an inverted 'V'. Lower your head forward into a tripod triangle in front of your hands. Press back up and push your head through shoulders at top.

2. Classic / Diamond Push-ups

Target: Pectorals, Triceps, Anterior Shoulders

Volume: 3 Sets × 12 - 15 Reps (60s rest)

Synergy: **Upper Body Density & Pushing Strength**

Cues: Keep elbows tucked at 45 degrees, body rigid as a plank. Full range of motion—touch chest to floor, lock out elbows cleanly at top.

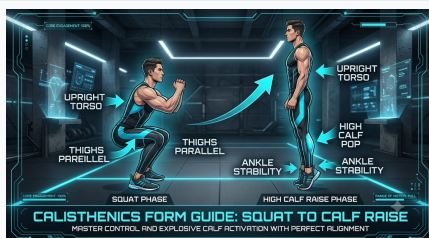

3. Doorframe / Table Inverted Rows

Target: Lats, Rhomboids, Scapular Retractors, Biceps

Volume: 3 Sets × 10 - 12 Reps (60s rest)

Synergy: **Shoulder Health, Scapular Control & Balance**

Cues: Grip the vertical side of a sturdy doorframe or lie under a heavy table. Keep core tight and pull your chest to hands, squeezing shoulder blades together.

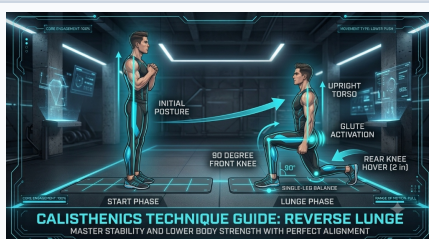

4. Bodyweight Squats + Calf Explosions

Target: Quads, Glutes, Calves, Achilles Tendon

Volume: 3 Sets × 15 - 20 Reps (45s rest)

Synergy: **Skateboarding Pop, Ollie Spring & Ankle Armor**

Cues: Squat down until thighs are parallel or below. Explode upward onto the balls of your toes for a 1-second calf contraction at the peak.

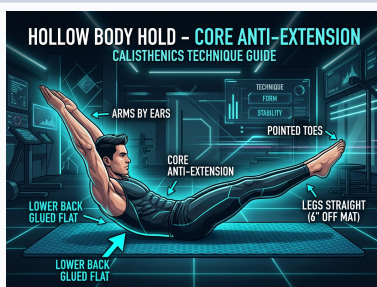

5. Alternating Reverse Lunges

Target: Glutes, Hamstrings, Single-Leg Stabilizers

Volume: 3 Sets × 10 Reps / leg (45s rest)

Synergy: **Single-Leg Balance for Skate Board Pushing**

Cues: Step smoothly backward, lower back knee until 1 inch off floor. Keep front knee tracking over toes. Drives stability on the skateboard.

6. Hollow Body Hold / Rocks

Target: Rectus Abdominis, Transverse Core, Pelvic Tilt

Volume: 3 Sets × 30 - 45 Seconds (45s rest)

Synergy: **Anti-Extension Core: Eliminates 'Banana' Handstand**

Cues: Lie on back. Glue your lower back into the ground—no gap. Arms glued by ears, toes pointed, lift legs and shoulder blades 4 inches off floor.

4. FREESTANDING HANDSTAND MASTERY ROADMAP

Why dropping from 70 kg to 62 kg is a Cheat Code for Handstands:

At 70 kg, your wrists and shoulders must balance 70 kilograms against gravity. When you hit 62 kg, you shed **8 kg of dead weight**. Your strength-to-weight ratio skyrockets, making your holds feel weightless!

STAGE 1: Wrist Armor & Scapular Foundation

Goal: Prepare wrists to support bodyweight & train shoulder elevation

Benchmark: **Target: 30s pain-free hold**

Technical Cues:

- First-knuckle push-ups on knees (3 sets of 10)
- Wrist rocks: palms down, fingers backward, rocks forward & sideways (2 mins)
- Scapular push-ups: push the floor away at top, spreading shoulder blades

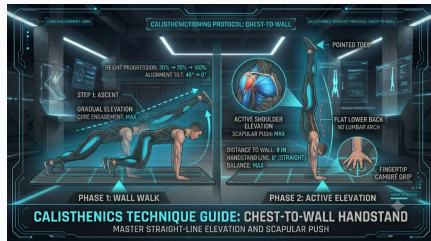

STAGE 2: Hollow Body Floor Alignment

Goal: Eliminate the 'banana arch' before going upside down

Benchmark: **Target: 3 sets of 40s clean hold**

Technical Cues:

- Press lumbar spine flat into ground—zero daylight under back
- Extend arms overhead, point toes, lift shoulders and legs 4 inches
- Breathe into belly without letting lower back lift off the floor

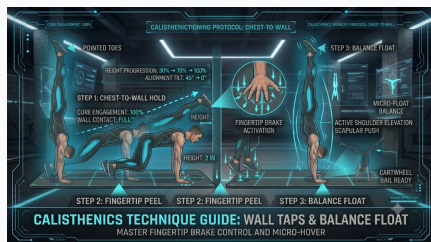

STAGE 3: Chest-to-Wall Handstand

Goal: The gold standard for straight-line overhead alignment

Benchmark: **Target: 3 sets of 45s wall holds**

Technical Cues:

- Walk feet up the wall facing the wall (never back-to-wall)
- Hands 6-10 inches from baseboard
- Shrug shoulders up to ears (scapular elevation)
- Arch fingertips like tiger claws (Cambré grip) to grip the floor

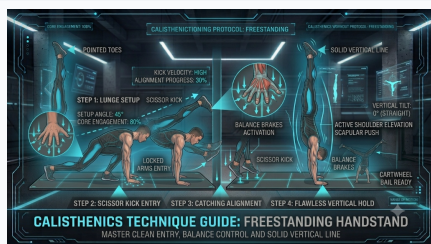

STAGE 4: Wall Taps & Fingertip Balance Float

Goal: Learn how fingers act as brakes and accelerators

Benchmark: **Target: 10s - 15s balance float**

Technical Cues:

- From chest-to-wall, press fingertips hard to peel toes 2 inches off wall
- Find the 'sweet spot' where both feet float freely for 1-3 seconds
- Master the cartwheel bail: pivot one hand and step down safely

STAGE 5: Freestanding Kick-Up & Balance Hold

Goal: Full freestanding control and consistent entry

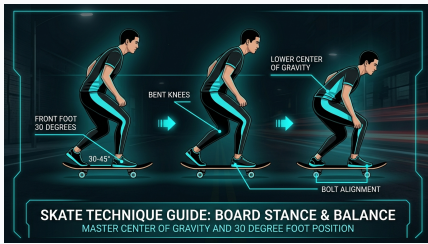

Benchmark: **Winter Arc Target: 10s clean freestanding hold**

Technical Cues:

- Lock elbows BEFORE kicking up (never bend arms on entry)
- Lead leg kicks up smoothly; trail leg joins like a compass needle
- Squeeze glutes, point toes straight to sky, micro-press with fingertips

5. SKATEBOARDING PROGRESSION ROADMAP (CRUISING TO OLLIE)

Skateboarding as Cardio: 45 minutes of skateboarding burns ~300 - 400 kcal while developing extraordinary ankle stability, balance, and leg reactivity. It is the most fun, functional cardio in existence.

Level 1: Stance & Stationary Balance

Core Skill: Identify front foot (Regular: Left forward | Goofy: Right forward)

Step-by-Step Instructions:

- Stand tall, have someone gently nudge your back: whichever foot steps out first is your front foot!
- Place front foot over front bolts at 30° angle. Back foot on tail bolts.
- Bend knees, drop center of mass, shift weight gently toe-to-heel.

Level 2: Controlled Pushing & Foot Braking

Core Skill: Smooth continuous propulsion & safe emergency stopping

Step-by-Step Instructions:

- Turn front foot straight along the deck.
- Keep 80% of bodyweight over front bent knee.
- Swing back foot forward and push straight back against the concrete.
- Foot brake: lightly slide sole of pushing shoe along ground to decelerate.

Level 3: Fluid Carving & Turning

Core Skill: Transfer weight across truck bushings to steer lines

Step-by-Step Instructions:

- Lean gently into your toes for toe-side turn.
- Drop weight into heels for heel-side turn.
- Open your shoulders and look where you want to go—the board follows your head!

Level 4: Kickturns (Backside & Frontside 90°)

Core Skill: Pivot on rear wheels to change direction instantly

Step-by-Step Instructions:

- Place back foot on pocket/tip of the tail.
- Apply quick light downward pressure to lift front wheels 2 inches.
- Lead with shoulders, pivot front wheels 45°-90°, and drop front trucks softly.

Level 5: The Ollie (Groundwork to Rolling)

Core Skill: The gateway to street skateboarding: pop, slide, and level out

Step-by-Step Instructions:

- Practice stationary in grass or sidewalk crack first.
- Back foot snaps tail down against concrete (THE POP).
- Front foot rolls onto outer pinky-toe edge and slides up to front bolts (THE SLIDE).
- Tuck both knees into chest in mid-air, absorb landing with bent knees over bolts.

6. DAILY PROTOCOL CHECKLIST & 90-DAY HABIT LOOP

The 4 Non-Negotiable Daily Anchors: Execute these 4 anchors every day. On rest days, replace workout with walking/mobility.

Anchor	Daily Requirement	Execution Strategy
Anchor 1: Handstand	10-15 mins daily practice	Wrist warmup + 3 sets chest-to-wall holds + balance floats
Anchor 2: Workout	Full Body Calisthenics	3-4 days/week: Pike pushups, rows, squats, hollow holds
Anchor 3: Skate / Steps	30-45m skate OR 9,000 steps	Cruising, foot-braking, carving or kickturns (~350 kcal burn)
Anchor 4: Nutrition	Under 1,800 kcal & 135g protein	5 rotis max/day + eggs/paneer/soya chunks + 3.5L water

The Golden Rules of Weighing & Tracking:

- Weigh yourself every morning:** Right after waking up, after emptying bladder, before eating or drinking water.
- Ignore daily fluctuations:** Your weight can jump up or down 0.5 - 1 kg due to sodium (salt) or water retention. Pay attention to the **weekly average**.
- Target Pace:** Aim for **0.5 kg to 0.7 kg fat loss per week**. In 12-14 weeks, you will cross the finish line at a razor-sharp **62.0 kg**!
- Progress Photos:** Take one front, side, and back photo in consistent lighting every Sunday morning.

THE WINTER ARC CREED:

'Discipline is choosing between what you want now and what you want most. In 90 days, you will walk into the room with 8 kg less fat, bulletproof shoulders, effortless balance upside down, and the freedom of riding a skateboard. Put in the work.'
